

Fasoo Data Radar

Find, Protect, Audit

- Determine the location of unstructured data
- Define sensitivity level of unstructured data
- Restrict file access to unauthorized users
- Trace how unstructured data is used
- Optimize other security solutions
- Eliminate unstructured data risk

Data Governance

Data Security

Locate and Identify Data

Classify Data

Remediate Findings

- Policy Adjustment
- Relocate
- Archive

Enable Controls

- Encryption
- Containerization
- Advanced Protection (EDRM)

Unstructured data is everywhere. Users can create, edit, move, delete files without proper authorization. Sensitive information is often in forms of unstructured data and may be stored in unauthorized and unsecured locations.

In order to enable organizations to gain insight into their unstructured data and enforce appropriate policies, they should first discover its location, volume, context; determine sensitivity level of the data to classify and apply adequate protection.

Fasoo Data Radar enables organizations to have visibility into the location of sensitive data, allowing them to remediate and enable controls. The solution can also allow organizations to understand context around the unstructured data, prioritize and protect it, remain compliant, and avoid data breaches.

Fasoo Data Radar

Fasoo Data Radar is a data governance solution for discovering and classifying the constantly changing set of unstructured data based on its association with people and other characteristics, showing the data's security vulnerability and dynamically applying security policies on a continuous basis.

The solution can scan files throughout the enterprise to find content that is confidential or of high value. It can scan files located within folders and logical drives on PCs – that is, it can scan files on file servers, cloud storage servers, repositories, and anything else that can be mounted as a logical drive or shared folder. The files that Fasoo Data Radar scans match templates which specify criteria for confidential files to be classified and secured.

About Fasoo

Fasoo provides unstructured data security and enterprise content platforms that enable our customers to protect, control, trace and analyze critical business information while enhancing productivity. Fasoo has successfully retained our leadership in the unstructured data security market by deploying enterprise-wide solutions for more than 1,500 organizations globally, securing more than 2.7 million users. Fasoo is experiencing continuous improvement in its global market position, based on our unique technology, ongoing R&D and strategic approach to comprehensive product capabilities by extending our core security capabilities into content-centric collaboration, behavioral analytics and information security consulting services.
